                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a numan insulin precursor comprising insuling A and B chains. This insuling precursor is a remponent of the chimneric proteins b5d-mini-precised; (AAY42860) and the chimner protein given in AAA42861. These chimners proteins additionally contain an Niterminal fragment of huma; growth beamone (h6H) and a cleavable of peptide linker (AAY42867). The h6H pertion of the chimneric protein acts as an intramolecular chaptering (hCM) for the insulin preciser.

The mabling it to fold correctly. The cleavable peptide linker has a crimnal Arg residue which enables the h6H portion of the chimner protein to be removed after including horting of the chimner protein to be removed after including the protein can be provide human insulin with organization chimneric protein and provide human insulin with sorrectly linked estable bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a micropreparism host, but also processed the fisher and recreases the sinterrollar the solutility of the fusion protein and decreases the interrollar four annotation and decreases the interrollar interrollar annotation and decreases the interrollar interrollar annotation and decreases the interrollar interrollars and not the folding of the fusion protein and decreases the interrollar interrollars and not an annotation and decreases the interrollar interrollars and not an annotation and not annotation and not an annotation and not annotation an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ::
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the fusion proteins, thus allowing folding of the fused institu precursor at commercially useful high concentrations. The procedural steps of cyanogen bromide cleavage, oxidative suiphitotysis and related purification steps can thus be eliminated, along with the use of tiah concentrations of mercaptan or the use of hydrophotic absorper, 1981.63

Freedmanth is produced by treating recombinant precursor protein with a mercaptan to provide 2-10 SH residues per Cys residue, in presence of a chaotropic agent and in aq. medium of pH 10-11, treating the prou. with 3-0 q hydrophobic adsorber resin per 1 aq. medium of pH 4-7, isolating the adsorbed resin and pro-insulin and desorbing the pro-insulin. This method produces pro-insulin with correctly bonded Cys bridges. Compared with known methods 1. Involves fewer stages (esp. no sulphitolysis or cyanogen bromide cleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68895-97. Sequences of insulin chain A, B and C are given in AAR68899-901.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Pro-insulth is produced by treating recombinant precursor protein with a mercaptan to provide 2-10 SE residues per Cys residue, in presence of a chaotropic agent and in ag. medium of pH 10-11, creating the prod. with 3-50 g hydrophobic adsorber resin per I ag. medium of pH 4-7, isolating the adsorbed resin and pro-insulin and desorbing the pro-insulin. This method produces pro-insulin with contectly bonded Cys bridges. Compared with known methods it includes fewer stages (esp. no sulphitolysis or gamogen bromide cleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68898-97. Sequences of pro-insulin l4 are given in AAR68898-901.
   involves fewer stages (esp. no sulphitolysis or cyanogen bromide cleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68895-97. Sequences of promingulant 1-4 are given in AAR68898-901. (Updated on 25-MAR-2003 to correct PN field.)

This sequence represents a chimeric protein, hGH-mini-proinsulin.
This chimeric protein contains an N-terminal fragment of human growth horzone (hGH) of the sequence given in AAV42855, a cleavable peptide linker (AAV42857), and a human insulin precursor comprising insulin as an intramplendar chaperone (HMC) for the chimeric protein acts as an intramplendar chaperone (HMC) for the chimeric protein acts and intramplendar chaperone (HMC) for the insulin precursor, enabling it to fold correctly. The cleavable peptide linker has a content of protein to be removed after folding has taken piece. Production of the chimeric protein to be removed after folding has taken piece. Production of recombinant human insulin via an hGH-proinsulin chimeric protein can provide human insulin via an hGH-proinsulin chimeric protein can provide human insulin via an hGH-proinsulin prides with chemen insulin. The IMC sequences not only protect insulin sequences to human insulin. The IMC sequences not only protect insulin sequences of human insulin. The IMC sequences not only protect insulin sequences the fusion protein and decrease the intermolecular interactions among the tusion proteins, thus allowing folding of the fosed insulin precursor at commercially useful high concentrations. ArgB11. AgB31 comprises the B and A chains of a claimed human insulin derivative. In the final claimed compsn. they are covalently connected via disulphide bonds between Cys residues A7/B7 and A20/R19. The derivative, which may be present as a zinc ion complex, can be used as a fast action treatment for diabetes. (Updated on 25-MAR-2003 to correct PN field.)

ArgB31 N-terminal EDAEAEAR. The insulin precursor comprises the B and A chains of a claimed fuman insulin derivative preceded by the N-terminal mating acids EEABAEAR. In the innal claimed companiety are covalently connected via disulphide bonds between dys residues A7/87 and A20/H19. The derivative, which may be present as a zinc ion complex, can be used as a fast action treatment for

AAQ86432 encodes AAR71695 mating factor alpha 1-Insulin precursor ArgB1, ArgB31 N-terminal EEAEABAER. The insulin precursor comprises the 3 and A chains of a claimed human insulin derivative preceded by the N-terminal amino acids EEAEABAER. In the final claimed composition are covalently connected via disulphide bonds between Cys residues A7/B7 and A20/B19. The derivative, which may be present dispetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3
This sequence represents a chimeric protein, which contains an N-terminal fragment of human qrowth hormone (1971) of the sequence qives in AAV42856, a cleavable peptide take (AAV42857), and a human lessils precursor comprising insulin A and B chaims (AAV42859). The hortion of the chimeric protein arts as an intracolemiar dispersor (INC) for the insulin precursor, enabling it to Gild correctly. The representation of the chimeric protein arts as an intracolemiar dispersor (INC) for the insulin precursor, enabling it to Gild correctly. The representation of the chimeric protein to be removed affor indicate his taken please. The chimeric protein to be removed affor indicate his taken provide fummer insulin via an heighprotissuile chimeric protein can provide fummer insulin with fewer necessary procedural steps, and better resulting a lighter yield of human issulin. The INC sequences not only protect issuling sequences from intracellular degradation by a riceobratism host, but also promote the folding of the lusson proteins, and decrease the intermolemular interactions among the fusion proteins, thus allowing folding of the fusion proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                              procedural steps of eyanogen bromide cleavage, exidative sulphinallysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /imbel-Lys residue linking masanin B chain to A chain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is a specific example of an insulin derivative which can be obtained in amorphous, monospherical form by dissolving in an n-propanol/Duffer mixture (pH 4.5-6.5) having n-propanol content 15% relative to water. The solution is then diluted with water to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amorphous, mono-spherical form of insulin derivs. - for treating diabetes mellitus, are produced by diluting soln. in aq. isopropanol, are stable when dried or in suspension
                                                                              This human insulin procursor has correctly positioned disciplide bridges between the A and B chains and is more resistant to proteolytic digestion than prior art insulin precursors. Yeast, strains transformed with LNA encoding this precursor can be cultured to secrete it in high yields. The precursor can be converted into mature numan insulin by transpeptication. BLCSUM62

Scoring table:

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 2000600000

Post-processing: Minimum Match 1868 Maximum Match 1868 Listing first 15 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result beam printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RyOliveira, A.E.A.; Machado, O.L.T.; Gomes, V.M.; Xavier-Neto, J.; Pereira, A.C.P. Protein Pept. Lett. 6, 15-21, 1959
Agritle: Jack bean seed coat contains a protein with complete sequence homology to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Scalin procursor - jack bean (fragments)
NiAlternate names: hypoglycemic agent; plant insulin
Cispecies: Canavalia cusiformis (jack bean)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conservative
